Cambodia Road Traffic Accident and Victim Information System Monthly Report – April 2006

I. Introduction

The **objective** of the Road Traffic Accident and Victim Information System (RTAVIS) is to provide government and development stakeholders in Cambodia with accurate, continuous and comprehensive information on **road traffic accidents and victims**.

It should allow them to better understand the current road safety situation, plan appropriate responses and evaluate impact of current and future initiatives.

The system is being developed by the Ministry of Public Works and Transport, the Ministry of Interior and the Ministry of Health, with the support of Handicap International.

In Siem Reap, Oddar Mean Chey and Kampong Cham provinces, the system is also supported by the Belgian Technical Cooperation.

The system is run based on data collection forms filled in by trained staff at **major hospitals, private clinics and traffic police**.

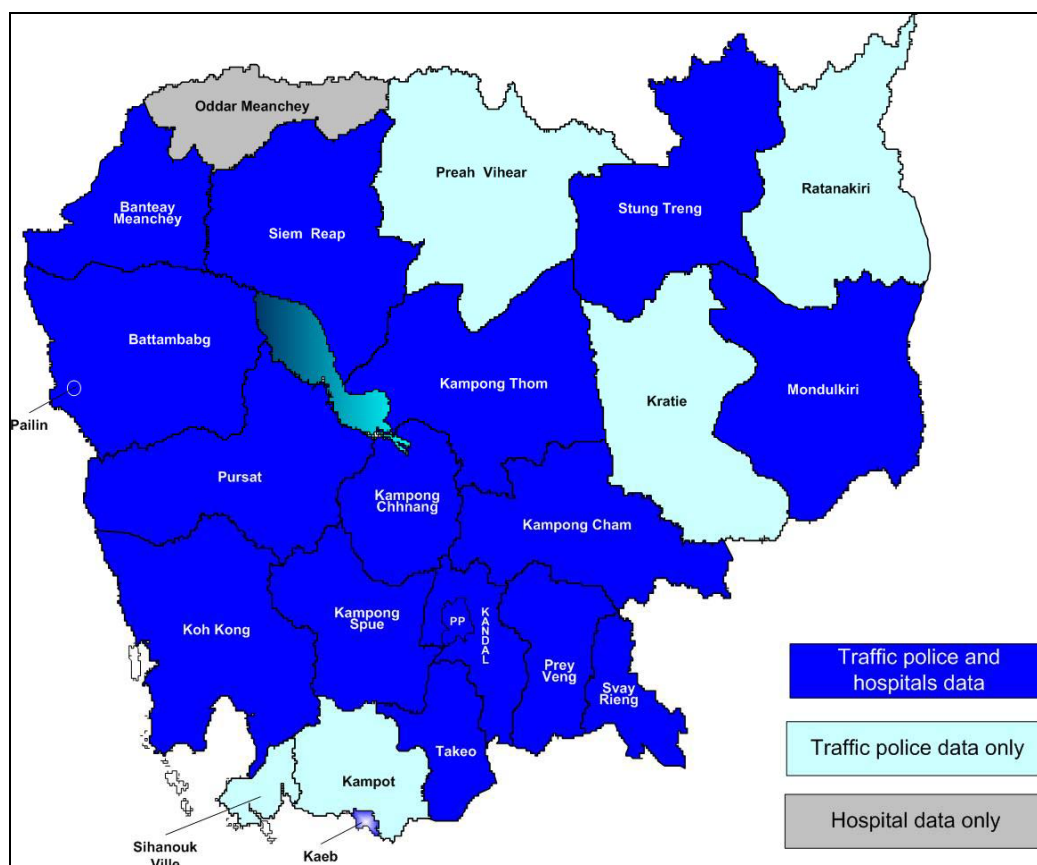

RTAVIS reports are **distributed monthly**. RTAVIS reports can also be found on the following website: www.cnctp.info

Notice:

This monthly report is a snapshot of the situation at a particular time of the year. More analysis will be provided in the annual report that will be published in **June 2006**.

II. System Coverage

RTAVIS covers the whole country, with health facility and traffic police data, as illustrated on the map here below:

Cambodia Road Traffic Accident and Victim Information System Monthly Report – April 2006

III. Executive Summary

Key findings for the month of **April 2006** are:

- A provisional number of **2,534 casualties** were reported by the participating hospitals, health centers, private clinics and traffic police departments in the 24 reporting provinces¹. Among them, **630 were severely injured and 166 died**.
- This corresponds to almost **6 fatalities per day**.
- 432 of those casualties were injured in Phnom Penh, corresponding to a **7% increase compared to April 2005**.
- The average daily number of casualties **has more than tripled during the Khmer New Year period** (14th, 15th and 16th of April) with a peak the 16th of April recording more than 270 casualties:
 - This increase was however **not observed in Phnom Penh**, where the number of casualties remained stabled during Khmer New Year².
 - This increase was particularly sharp in Kampong Cham province.
 - This increase was observed particularly among **young people aged between 15 to 19 years old** (they represented 21% of the casualties, compared to 13% during normal days).

- 41% of casualties suffered from head injuries.

¹ **Notice:** in some reporting provinces, data are sent late by hospitals and traffic police offices to the data collection office and can therefore not be included in the monthly reports but will be included in the annual report.

² The total number of casualties in Phnom Penh in April 2006 is even lower than the number of casualties during the previous month (March 2006).
