Cambodia Road Traffic Accident and Victim Information System Monthly Report – August 2006

I. Introduction

The **objective** of the Road Traffic Accident and Victim Information System (RTAVIS) is to provide government and development stakeholders in Cambodia with accurate, continuous and comprehensive information on **road traffic accidents and victims**.

It should allow them to better understand the current road safety situation, plan appropriate responses and evaluate impact of current and future initiatives.

The system is being developed by the Ministry of Public Works and Transport, the Ministry of Interior and the Ministry of Health, with the support of Handicap International.

In Siem Reap, Otdar Mean Chey and Kampong Cham provinces, the system is also supported by the Belgian Technical Cooperation.

The system is run based on data collection forms filled in by trained staff at **major hospitals, private clinics and traffic police**.

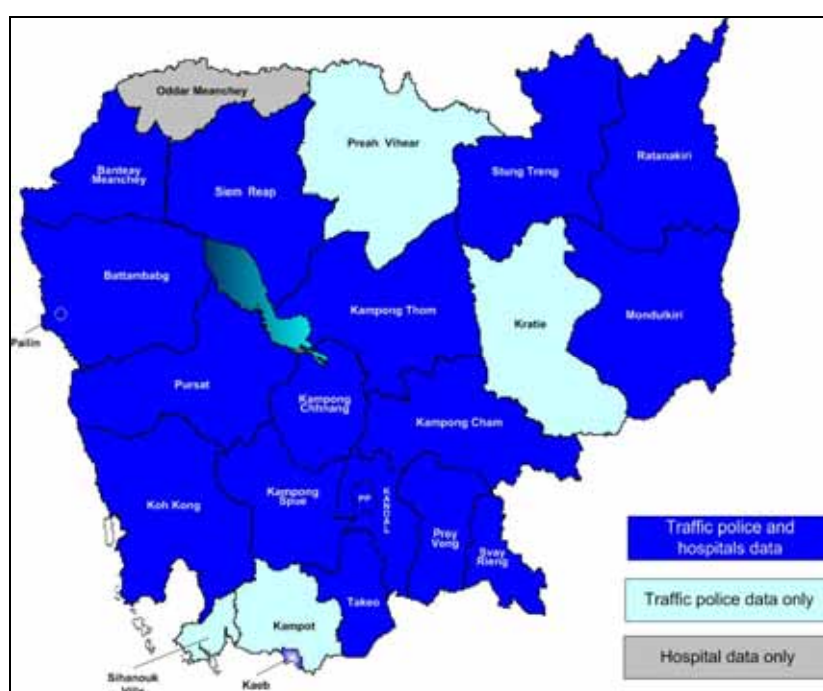

RTAVIS reports are **distributed monthly**. RTAVIS reports can also be found on the following website: www.cnctp.info

Notice:

This monthly report is a snapshot of the situation at a particular time of the year. More analysis is provided in the annual report. The annual report 2005 has been released in June. Annual report 2006 will be released in April 2007.

II. System Coverage

RTAVIS covers the whole country, with health facility and traffic police data, as illustrated on the map here below:

Cambodia Road Traffic Accident and Victim Information System Monthly Report – August 2006

III. System Update

Introduction of GPS

From July 2006, Geographic Position System (GPS) devices have been introduced to the traffic police in Russei Keo District in Phnom Penh. The GPS coordinates allow us now to exactly locate accidents, using GIS data. GPS devices will from now be progressively introduced to other districts of Phnom Penh and provinces crossed by major national roads.

On the medium term, this will enable RTAVIS to identify blackspots of the Cambodian Road System.

The following chart shows the locations of road traffic accidents in Russei Keo district, as well as serious accidents (involving fatalities) in all districts of Phnom Penh, in July and August.

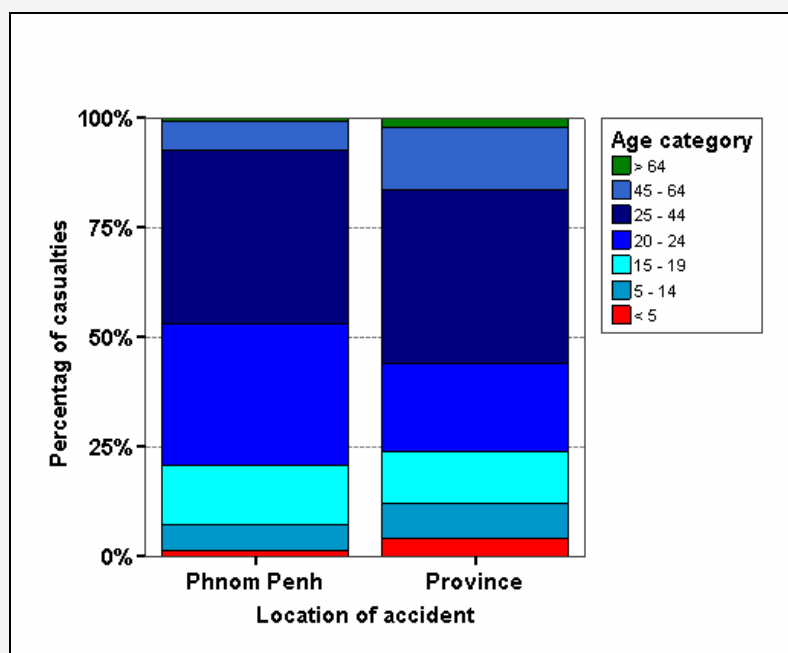

Cambodia Road Traffic Accident and Victim Information System Monthly Report – August 2006

IV. Executive Summary

Key findings for the month of **August 2006** are the following:

- A provisional number of **1,356 casualties** were reported by the participating hospitals, health centres, private clinics and traffic police departments in the 24 reporting provinces. Among them, **232 were severely injured and 78 died**. The decrease of casualties, compared to the previous months, is partly due to the fact that in some reporting provinces, data are sent late by hospitals and traffic police offices to the data collection office and can therefore not be included in the monthly reports but will be included in the annual report.
- **In Phnom Penh, 388 casualties** were reported, corresponding to a **20% decrease compared to August 2005** and a **9% increase** compared to the previous month.
- The proportion of casualties due to dangerous overtaking (**19%**) **has almost doubled**, compared to the average of the first 6 months of 2006 (10%).
- **46%** of casualties suffered from head injuries.
- **26%** of casualties were workers, corresponding to a **24% increase compared to the previous month**, due to many serious accidents involving trucks transporting garment factory workers.
- Estimation of the average hospital treatment cost per casualty: **100 US\$¹**
- Estimation of the average vehicle damage cost per vehicle: **182 US\$²**
- The proportion of young people casualties (**age 20-24**) is much more important in Phnom Penh than in the rest of the country (**32% compared to 20%**), while the proportion of people above 45 years old is higher in provinces than in Phnom Penh (16% compared to 7%).

¹ This figure is based on hospital data only and for a limited number of casualties (341) only. Hospitals are indeed not always able to estimate the full treatment cost in advance.

² This figure is based on traffic police data only.
