Cambodia Road Traffic Accident and Victim Information System Monthly Report – July 2006

I. Introduction

The **objective** of the Road Traffic Accident and Victim Information System (RTAVIS) is to provide government and development stakeholders in Cambodia with accurate, continuous and comprehensive information on **road traffic accidents and victims**.

It should allow them to better understand the current road safety situation, plan appropriate responses and evaluate impact of current and future initiatives.

The system is being developed by the Ministry of Public Works and Transport, the Ministry of Interior and the Ministry of Health, with the support of Handicap International.

In Siem Reap, Otdar Mean Chey and Kampong Cham provinces, the system is also supported by the Belgian Technical Cooperation.

The system is run based on data collection forms filled in by trained staff at **major hospitals, private clinics and traffic police**.

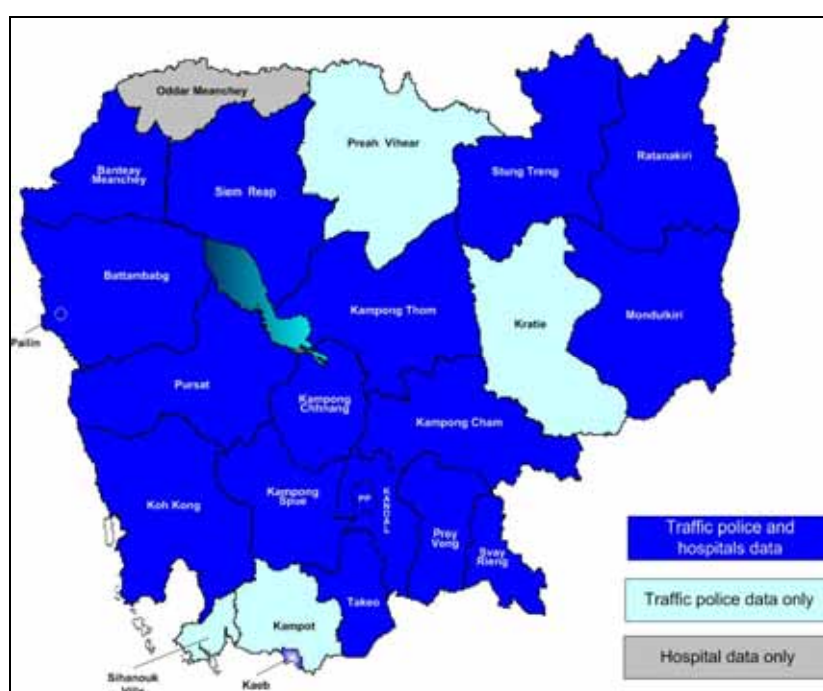

RTAVIS reports are **distributed monthly**. RTAVIS reports can also be found on the following website: www.cnctp.info

Notice:

This monthly report is a snapshot of the situation at a particular time of the year. More analysis is provided in the annual report. The annual report 2005 has been released in June. Annual report 2006 will be released in April 2007.

II. System Coverage

RTAVIS covers the whole country, with health facility and traffic police data, as illustrated on the map here below:

Cambodia Road Traffic Accident and Victim Information System

Monthly Report – July 2006

III. System Updated

New health facilities in the data collection perimeter

In July 2006, Kunthabopha hospital in Phnom Penh started to collaborate to RTAVIS. The integration of the data from Kunthabopha is a very important step for RTAVIS, as it will contribute to get more information on child injuries.

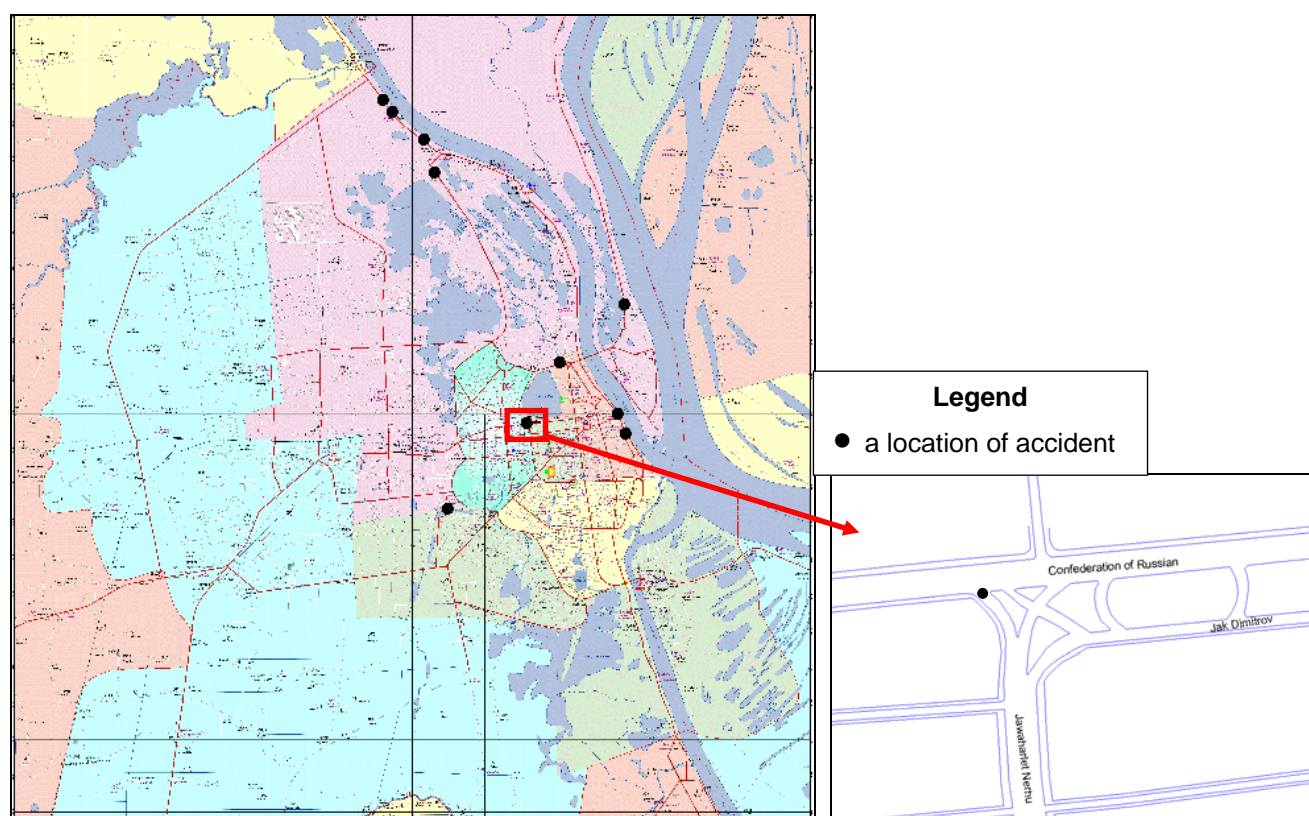

A referral hospital in Rattanak Kiri province as well as two health centers in Otdar Mean Chey province have also been added to the data collection perimeter.

Introduction of GPS

From July 2006, Geographic Position System (GPS) devices have been introduced to the traffic police in Russei Keo District in Phnom Penh. The GPS coordinates allow us now to exactly locate accidents, using GIS data. GPS devices will from now be progressively introduced to other districts of Phnom Penh and provinces crossed by major national roads.

On the medium term, this will enable RTAVIS to identify blackspots of the Cambodian Road System.

The following charts show the locations of road traffic accidents in Russei Keo district for the month of July, as well as serious accidents (involving fatalities) in all districts of Phnom Penh

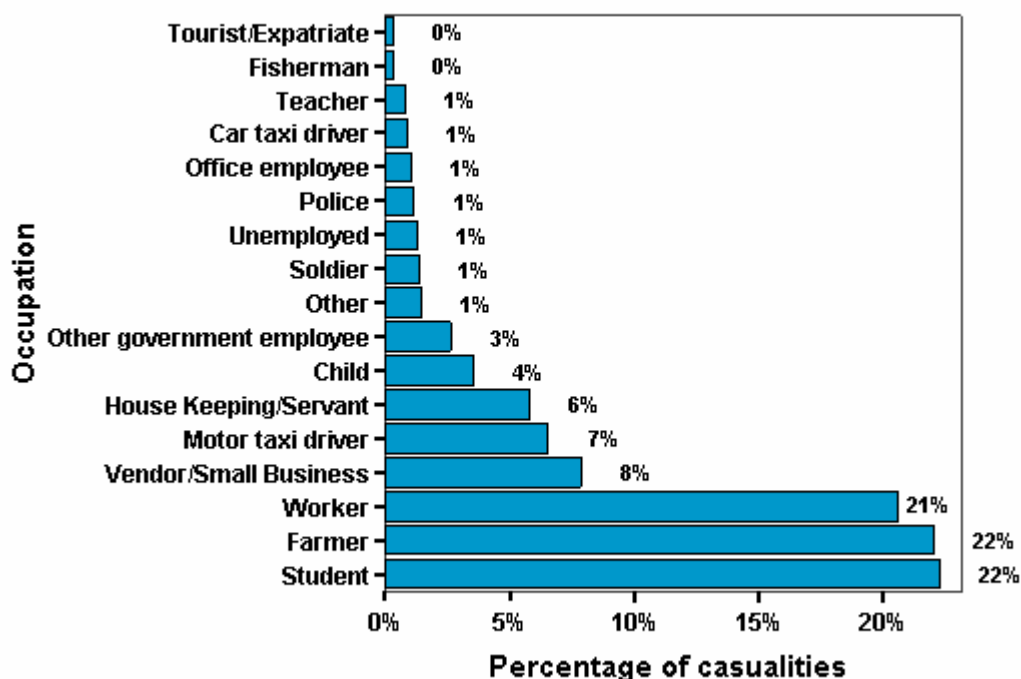

Example of road traffic accident locations plotted in the map

IV. Executive Summary

Key findings for the month of **July 2006** are the following:

- A provisional number of **1,474 casualties** were reported by the participating hospitals, health centres, private clinics and traffic police departments in the 24 reporting provinces. Among them, **256 were severely injured and 79 died**. The decrease of casualties, compared to the previous months, is partly due to the fact that in some reporting provinces, data are sent late by hospitals and traffic police offices to the data collection office and can therefore not be included in the monthly reports but will be included in the annual report.
- **In Phnom Penh, 354 casualties** were reported, corresponding to a **16% decrease** compared to the average of the last 6 months. This important decrease can be explained by several factors (e.g. less motorbike traffic due to rain falls) but it is too early to give a valid explanation. If this decrease is confirmed in the coming months, additional analysis will be provided.
- **40%** of casualties suffered from head injuries.
- **The active part of the population** remained the most affected by road traffic accidents:
 - **22%** of casualties were farmers;
 - **22%** of casualties were students;
 - **21%** of casualties were workers;
