Cambodia Road Traffic Accident and Victim Information System

Monthly Report – May 2006

I. Introduction

The **objective** of the Road Traffic Accident and Victim Information System (RTAVIS) is to provide government and development stakeholders in Cambodia with accurate, continuous and comprehensive information on **road traffic accidents and victims**.

It should allow them to better understand the current road safety situation, plan appropriate responses and evaluate impact of current and future initiatives.

The system is being developed by the Ministry of Public Works and Transport, the Ministry of Interior and the Ministry of Health, with the support of Handicap International.

In Siem Reap, Oddar Mean Chey and Kampong Cham provinces, the system is also supported by the Belgian Technical Cooperation.

The system is run based on data collection forms filled in by trained staff at **major hospitals, private clinics and traffic police**.

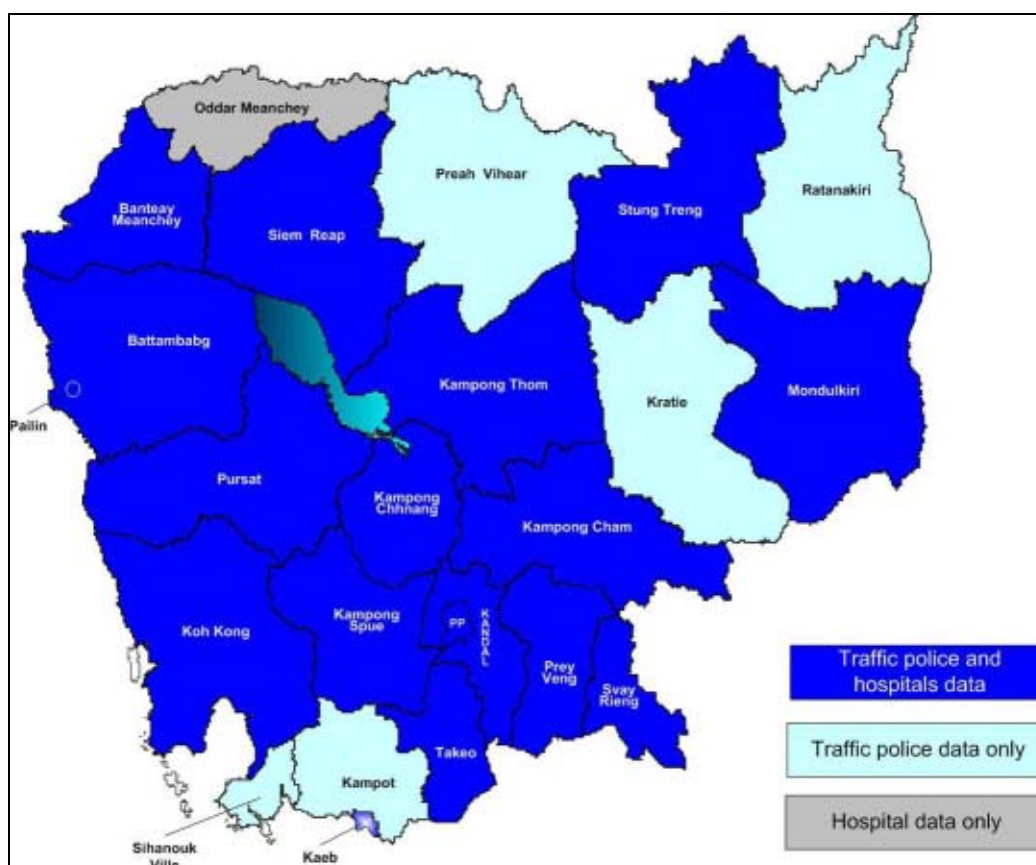

RTAVIS reports are **distributed monthly**. RTAVIS reports can also be found on the following website: www.cnctp.info

Notice:

This monthly report is a snapshot of the situation at a particular time of the year. More analysis is provided in the annual report. The annual report 2005 has been released last month. Annual report 2006 will be released in April 2007

II. System Coverage

RTAVIS covers the whole country, with health facility and traffic police data, as illustrated on the map here below:

Cambodia Road Traffic Accident and Victim Information System Monthly Report – May 2006

III. Executive Summary

Key findings for the month of **May 2006** are:

- A provisional number of **1,767 casualties** were reported by the participating hospitals, health centers, private clinics and traffic police departments in the 24 reporting provinces¹. Among them, **434 were severely injured and 90 died**.
- 437 of those casualties were injured in Phnom Penh, corresponding to an **8% decrease compared to May 2005** and a **1% increase** compared to the previous month.
- In the provinces, and especially in Siem Reap and Kampong Cham provinces, the number of casualties however strongly decreased compared to the previous month. This is due to the fact that a very high number of casualties had been reported in April during the Khmer New Year period.
- 38% of casualties suffered from head injuries.
- 29% of four-wheels vehicles involved in road traffic accidents were **right-hand drives**.

¹ **Notice:** in some reporting provinces, data are sent late by hospitals and traffic police offices to the data collection office and can therefore not be included in the monthly reports but will be included in the annual report.
