Cambodia Road Traffic Accident and Victim Information System Monthly Report – May 2007

I. Introduction

The **objective** of the Road Traffic Accident and Victim Information System (RTAVIS) is to provide government and development stakeholders in Cambodia with accurate, continuous and comprehensive information on **road traffic accidents and victims**.

It should allow them to better understand the current road safety situation, plan appropriate responses and evaluate impact of current and future initiatives.

The system is being developed by the Ministry of Public Works and Transport, the Ministry of Interior and the Ministry of Health, with the support of Handicap International.

In Siem Reap, Otdar Mean Chey and Kampong Cham provinces, the system is also supported by the Belgian Technical Cooperation.

The system is run based on data collection forms filled in by trained staff at **major hospitals, private clinics and traffic police**.

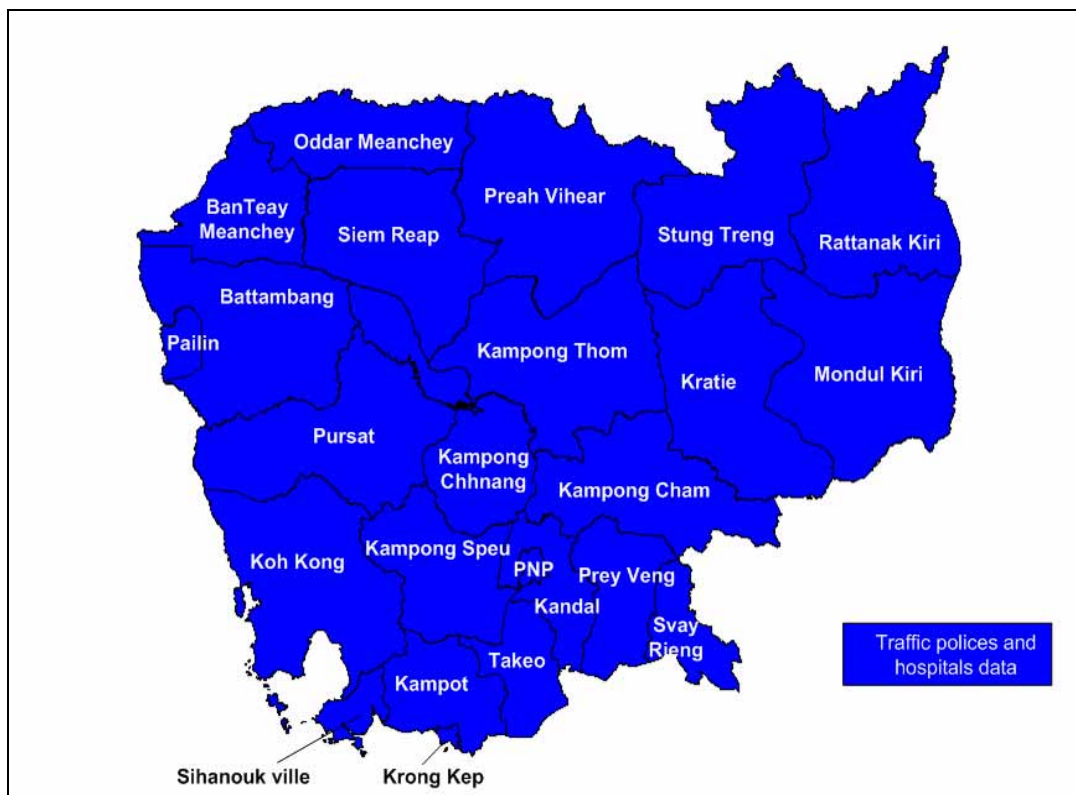

RTAVIS reports are **distributed monthly**. RTAVIS reports can also be found on the following website: www.roadsafetycambodia.info and www.cnctp.info

Notice:

This monthly report is a snapshot of the situation at a particular time of the year. More analysis is provided in the annual report. The annual report 2006 has been released in June 2007.

II. System Coverage

RTAVIS covers the whole country, with health facility and traffic police data, as illustrated on the map here below:

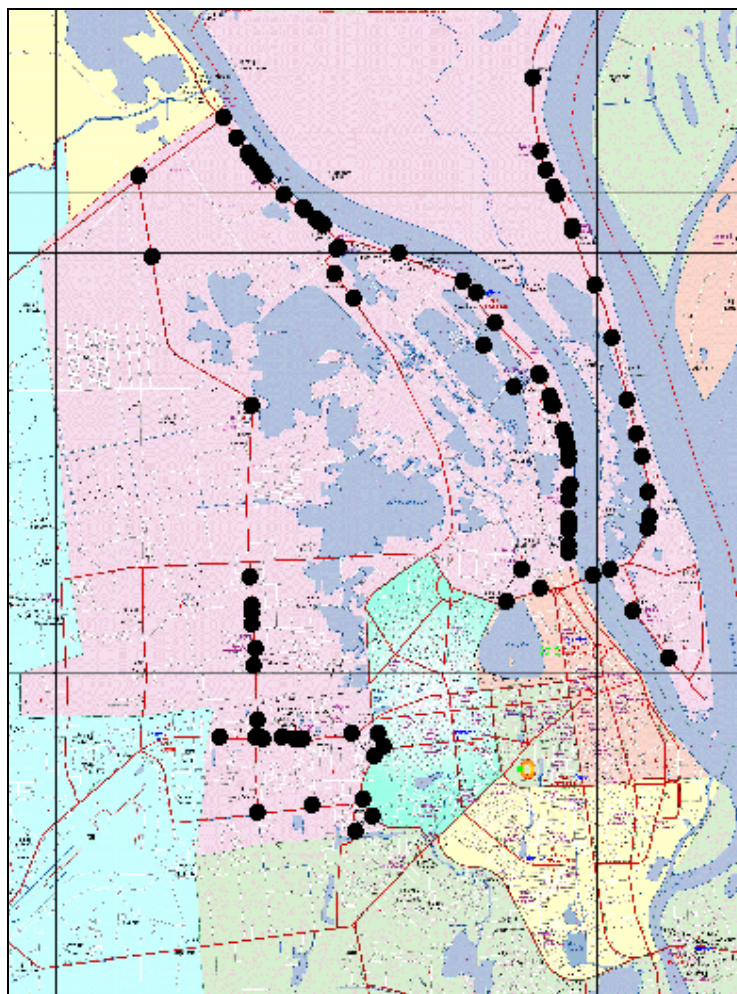

Cambodia Road Traffic Accident and Victim Information System Monthly Report – May 2007

III. System Update

Introduction of GPS

From July 2006, Global Position System (GPS) devices have been introduced to the traffic police in Russei Keo District in Phnom Penh. The GPS coordinates allow us now to exactly locate accidents, using GIS data. GPS devices will from now be progressively introduced to other districts of Phnom Penh and provinces crossed by major national roads. On the medium term, this will enable RTAVIS to identify blackspots of the Cambodian Road System.

The following chart shows the locations of road traffic accidents in Russei Keo district from July 2006 to May 2007.

IV. Executive Summary

Key findings for the month of **May 2007** are the following:

- A provisional number of **1,768 casualties** were reported by the participating hospitals, health centres, private clinics and traffic police departments in the 24 reporting provinces. Among them, **407 were severely injured and 96 died**.
- **In Phnom Penh, 465 casualties** were reported, corresponding to a **6% increase compared to May 2006** and a **39% increase** compared to the previous month.
- 29% of four-wheeled vehicles involved in accident are **right-hand-drive**.
- 34% of casualties aged between 15 and 24 years old.
- 36% of casualties were suffering from head injury.
- **Farmers constitute the larger group of fatalities than casualties** (32% of fatalities, 28% of casualties).
- **Motorbike users account for the large majority of casualties and fatalities** (74% and 61%), followed by pedestrians and bicyclists. It is very interesting to note that **pedestrians share 15% of fatalities, while they represent only 7% of casualties**.
