Cambodia Road Traffic Accident and Victim Information System Monthly Report – February 2006

III. Executive Summary

Key findings for the month of **February 2006** are:

- **A provisional number of 1,789 casualties** were reported by the participating hospitals, private clinics and traffic police departments in the 24 reporting provinces¹. Among them, **452 were severely injured and 67 died**.
- **368 of those casualties were injured in Phnom Penh**, corresponding to an **8% decrease compared to February 2005**. This decrease might be explained by the fact that last year Chinese New Year was celebrated in February, while it was celebrated in January this year. A higher number of casualties is observed during celebrations such as Chinese New Year, Khmer New Year and the Water Festival.
- 28% of the casualties were injured in accidents where the **driver of the vehicle causing the accident escaped after the accident**.
- 44% of four-wheeled vehicles involved in road traffic accidents where right-hand drives, a higher number than the 2005 average which is 34%.
- Less than 40% of severely injured casualties traveled to hospital by ambulance.
- More than 40% of severely injured casualties took more than 2 hours to reach the hospital.

¹ **Notice:** in some reporting provinces, data are sent late by hospitals to the data collection office and can not be included in the monthly reports but will be included in the annual report.
